

Earth and Space

An Earthy Exploration for Grades 4-6

Learn what the Earth is made of, explore the plants and animals that live here and discover the role our planet plays in the universe we call home.

Day 1, Rocking and Rolling: Learn about the history of the earth by making rocks, decoding fossils, and even mapping a volcano!

Day 2, Happenin' Habitats: Learn about the creatures of our planet and how they've adapted to their homes by behavior games, special observational labs, and developing your own unique animal species.

Day 3, Seeds of Exploration: Investigate the importance of plants firsthand through awesome experiments and tasty tests!

Day 4, Star Trekking: What's beyond our solar system? Today we will take geology and astronomy to a whole new level by examining and creating other celestial bodies!

Day 5, Alien Possibilities: Is there life on other planets? Using the knowledge from exciting astrobiology experiments and what we have learned this week, we will explore the possibilities of real extraterrestrial life!
